

## College of Science

**Department:** Computer Science  
**Course:** 100w  
**Instructor(s):** Debra Caires-Mullens and June Sheldon  
**Assignment:** Literature Review  
**Incorporates ACRL Standards:** 1, 2, 3, 4, 5

Students pretend they are consultants for a biotechnology corporation. Their assigned company has asked them to investigate a technology and determine if the technology will help improve productivity, or to explain to the company what type of technology is best for their needs. This decision should be based on scholarly, primary scientific research and not on consumer information. Students write a Literature Review using no less than 4 primary research articles written in the past 2-3 years on their topic. Articles must be peer-reviewed and cited in APA style.
